

Abstract

The present invention relates to an interlocking unit, comprising one or more  
5 tongues and one or more grooves being provided with mechanically integrating locking  
means, wherein at least a part of said one or more tongues or at least a part of said one  
or more grooves, or both, is provided a polymer film having a  $T_g$  of higher than about -  
15°C.

The present invention further relates to a floor covering, a wall covering, a  
10 method of producing an interlocking unit and uses thereof.
